

**IS YOUR  
AIR CONDITIONER  
MAKING YOUR  
FAMILY SICK?**

# CLEANING YOUR FILTER ISN'T ENOUGH.

## It's what you can't see that can harm you and your family.

- The moist environment created inside your air conditioner through its normal operation is the ideal environment for mould and bacteria to grow and flourish in as little as 3 months.
- You may dust the filter of your air conditioner. You may even regularly wash it in an anti-bacterial solution. But contaminants such as mould and bacteria will immediately return.
- The real problems lie in the areas you can't reach; the indoor coil, fan and drain pans are all moist environments which mould, fungus and bacteria thrive in.
- An air conditioner contaminated with unacceptable levels of mould & bacteria can suppress your immune system, cause cold & flu-like symptoms, skin irritations, hayfever & trigger asthma attacks.
- The best way to ensure that your home is protected is to have the mould, fungus and bacteria removed from your air conditioner, then have treatments applied that protect against re-contamination.

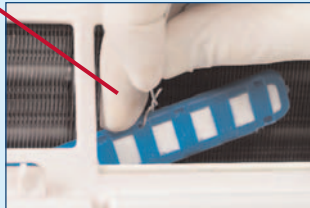

# THE AERISGUARD 10 STEP TREATMENT SYSTEM.

AerisGuard must be applied to any air conditioning unit, ducted or high-wall split, by an accredited AerisGuard technician. The process will take around 1 hour per unit to complete.

## STEP 9

**AerisGuard Condensate Pan Tablet**  
Protects drain line from blocking.

## STEP 8

**AerisGuard Filter Treatment**  
Provides protection against re-colonisation of mould and bacteria on filters.

## STEP 7

**Filter Cleaning**  
Removes visible dust, mould & bacteria from filters.

## STEP 6

**AerisGuard Coil Treatment**  
Protects the indoor coils against re-colonisation for 12 months.

## STEP 1

**System Assessment**  
As all systems are different, the technician must first become familiar with the unit.

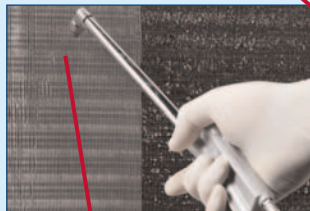

## STEP 2

**System Access Preparation**  
Don relevant safety equipment. Access the filters, coils & drain pan by removing appropriate panels or ductwork.

## STEP 3

**Contact Vacuum Pre-Cleaning**  
Removal of bulk dust build up before application of liquids.

## STEP 4

**Clean Indoor Coil with AerisGuard Coil Cleaner**  
A bioactive multi-enzyme formulation is used to dissolve mould & bacteria deep in the coil.

## STEP 5

**Coil Rinsing**  
Coil must be totally flushed to remove all contaminants. Specific techniques are used to ensure contaminants are removed from deep inside the coil.

# PROTECTING THE HEALTH OF YOUR FAMILY.

## 12 months peace of mind for the health of your family.

You may have to work hard to prevent mould and bacteria growing in your bathroom and other parts of your home, but it's easy to prevent harmful contaminants from growing inside your air conditioner.

The residual action of AerisGuard treatment products means that the active ingredients are released over a period of months. This will ensure the long-term health of the air from your air conditioner.

- ✓ Healthier air
- ✓ 12 months protection
- ✓ Improved airflow
- ✓ Reduced electricity costs

## More efficient air conditioning means you'll save money, too.

A build-up of contamination also makes your air conditioner work much harder and become less effective. Treating your air conditioning system with AerisGuard is completely non-corrosive and will immediately restore efficiency, reduce energy costs and even extend the life of your unit, so it's a win-win situation in every respect.

## Prof. Kerryn Phelps supports the need for healthy air conditioning.

Prof. Kerryn Phelps is concerned about the effects of contaminated air conditioners. She says "By simply ensuring that your air delivery system remains free of contamination, you can go a long way to improving the health of you and your family."

## Ask for AerisGuard by name.

No other product worldwide offers the same long term protection. So ask your air conditioning technician to not only clean it, but to AerisGuard it as well. The contact details of your nearest accredited AerisGuard applicator are located on the back of this brochure.

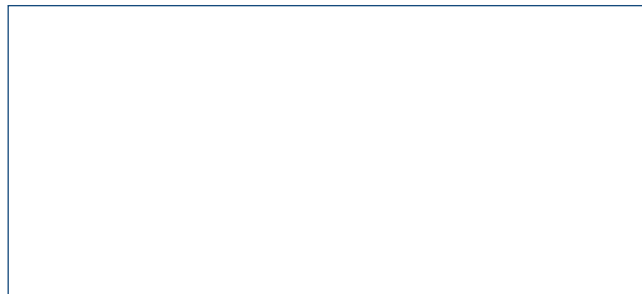

# AN AUSTRALIAN BREAKTHROUGH BRINGING HEALTHY AIR TO THE WORLD.

The AerisGuard Bioactive Treatment System was originally developed to clean and decontaminate the air conditioning units servicing multi-storey office buildings, hospitals, indoor shopping malls and airports. This Australian invention is now being applied to ducted and reverse cycle air conditioners in over 20 countries around the world.
